ALVA CASE STUDY

TEX

Our architectural grade exterior wall sconces are made in the USA to withstand the harshest weather environments. They are finished using an industrial grade primer and architectural finish designed for harsh exterior use.

KEY FEATURES:

- Large Scale Fixtures (Up to 60")
- Made in the USA. All fixtures are handcrafted out of heavy gauge aluminum in our California factory
- Industry-leading IP66 rating (can be power washed at close range for easy maintenance)

"As we contemplated the exterior lighting of the building, our hope was to find a fixture that accented the architecture of the building without dominating it."

WESCOTT L EDWARDS
BORArchitecture, pllc

ALVA's outdoor light fixtures are designed from the inception to be illuminated with state-of-the-art LED technology. This design approach allows ALVA to provide a unique combination of even illumination with no glare while also providing the industry's longest rated lifetime for the LED light source.

ALVA'S IP66 RATED LED MODULE

ALVA's LED modules are designed to be outdoors in harsh environments from extreme cold to extreme heat. The module is made of heavy gauge aluminum to provide thermal management to the LEDs and internal electronics.

"The final installed product exceeded our hopes. The color of the fixture also complimented the building materials brilliantly. The light level was ideal for accenting the stone pilasters without taking away from the other architectural features of the building."
